Igor Paganini Zanin

DevOps Engineer | Security Analyst
Florianópolis, Santa Catarina, Brazil

Summary

I am someone eager for learning, especially when it comes to programming logic. Currently, I am studying Systems Analysis and Development, and in 2021, I decided to study Python as a starting point for my career in IT.

I am currently working as a DevOps, where I have gained valuable experience with Maintenance of services and applications on Amazon Web Services, Development of Infrastructure as Code using Terraform and Ansible, development of front/back applications/services, also build of pipelines and configuration of containers and tasks with containerization.

Also working as a Security Analyst, focusing on Security Monitoring, Vulnerability Assessment, Risk Analysis, and the Implementation of Security Measures. This has allowed me to develop a comprehensive approach to maintaining and improving the security posture of the systems and applications I manage.

Experience

ENGIE Brasil
